

Implement GCD & LCM using recursion

1. Start
2. Input num1, num2, hcf, lcm
3. Output enter two integer values
4. $hcf = gcd(num1, num2)$
5. Output GCD, LCM
6. Stop.

* $gcd(int\ x, int\ y)$

1. Start
2. if $(y == 0)$
3. return x
4. else
5. return $gcd(y, x \% y)$
6. Stop.

$gcd(int\ x; int\ y)$
